

Candidate

Base Resume:

Yahia FERARSA ■📍Algiers, Algeria /envelope📧yahia.ferarsa@g.enp.edu.dz
■📞06 62639671 /linkedin-👤yahia ferarsa /githubyahia-fr Education National Polytechnic School Industrial Engineering - Data Science and Artificial Intelligence Option Oct 2023 – Present
National Polytechnic School Preparatory Classes in Science and Technology Oct 2021 – July 2023
Baccalaureate in Mathematics Mlayka Tayeb Benaissa High School 2021 ■Honors: Very good.
Experience Holcim Lafarge Algeria Data Science Intern Feb 2025 - May 2025 ■Analyzed carrier behavior and identified optimal delivery scenarios. ■Forecasted transportation costs and quantities with time series models (ARIMA, SARIMA, LSTM). ■Automated performance reports with Power BI to monitor logistics indicators. Société Générale Algeria Data Science Intern Nov 2024 - May 2025 ■Created interactive dashboards with Power BI. ■Developed predictive models to optimize customer segmentation (Python, scikit-learn, PyTorch). ■Deployed and improved a RAG-based chatbot to meet organizational needs. STEPPOST Data Science Intern July 2024 – Nov 2024 ■Developed a social media management platform with AI. ■Integrated a recommendation system for social account optimization. ■Automated data extraction via Python scripts and sentiment analysis of user comments. SAIDAL Systems and Databases Intern Dec 2023 - Jan 2024 ■Introductory internship. Projects ■Yassir : Analyzed customer delivery sentiments via multilingual NLP; predicted trip completion to improve service efficiency. ■Algeria Data Cup : Solved 5 real-world cases: meal forecasting (BNP), threat detection (Biopharm), customer risk (Grant Thornton), social sentiment (SocialOScope), etc. ■Bank Fraud : Supervised model to identify suspicious behavior in real-time transaction data. ■Report Generation with LLMs : Automated pipeline with PostgreSQL, Airbyte, and Gemini to create intelligent business reports. ■Job Recommendation System : Personalized job offer recommendations via a hybrid engine combining collaborative filtering and natural language processing. Technologies Languages : Python, SQL, C++ ML/DL : Scikit-learn, PyTorch, Keras, XGBoost, LightGBM NLP : Transformers (HF), spaCy, NLTK Vision : OpenCV, YOLOv8 LLMs/GenAI : Gemini, LangChain, RAG Data/Big Data : Spark, Hadoop, PostgreSQL, Airbyte BI/Visualization : Power BI DevOps : Docker, Git Yahia FERARSA -

AI Suggested Improvements:

- Quantify the impact of your work. For example, instead of 'Improved service efficiency', specify the percentage improvement in trip completion rate after implementing the NLP-based sentiment analysis.
- Provide more detail on the specific algorithms used in each project. For example, in the Bank Fraud project, mention the specific algorithms used for real-time fraud detection (e.g., Isolation Forest, One-Class SVM).
- Elaborate on the specific contributions to the social media management platform. Did you build the entire platform from scratch, or were you responsible for specific modules? What technologies were used (frontend, backend)?
- Specify the scale of the projects. How many data points were used? How many users did your recommendation system serve?
- Include metrics for the RAG-based chatbot: e.g., reduction in customer service inquiries, improvement in information retrieval accuracy.
- Add 'Tensorflow' to ML/DL if you have experience with it.
